# Foreword

---

The Public health care system in Ethiopia is structured around the concept of a “health network model” that uses a three-tiered health care delivery model. To ensure optimum utilization of the network of health services at all levels, a functional and well-coordinated referral system has to be implemented. Such coordination is very important to maximize the efficiency of our health care services in hospitals and primary care facilities.

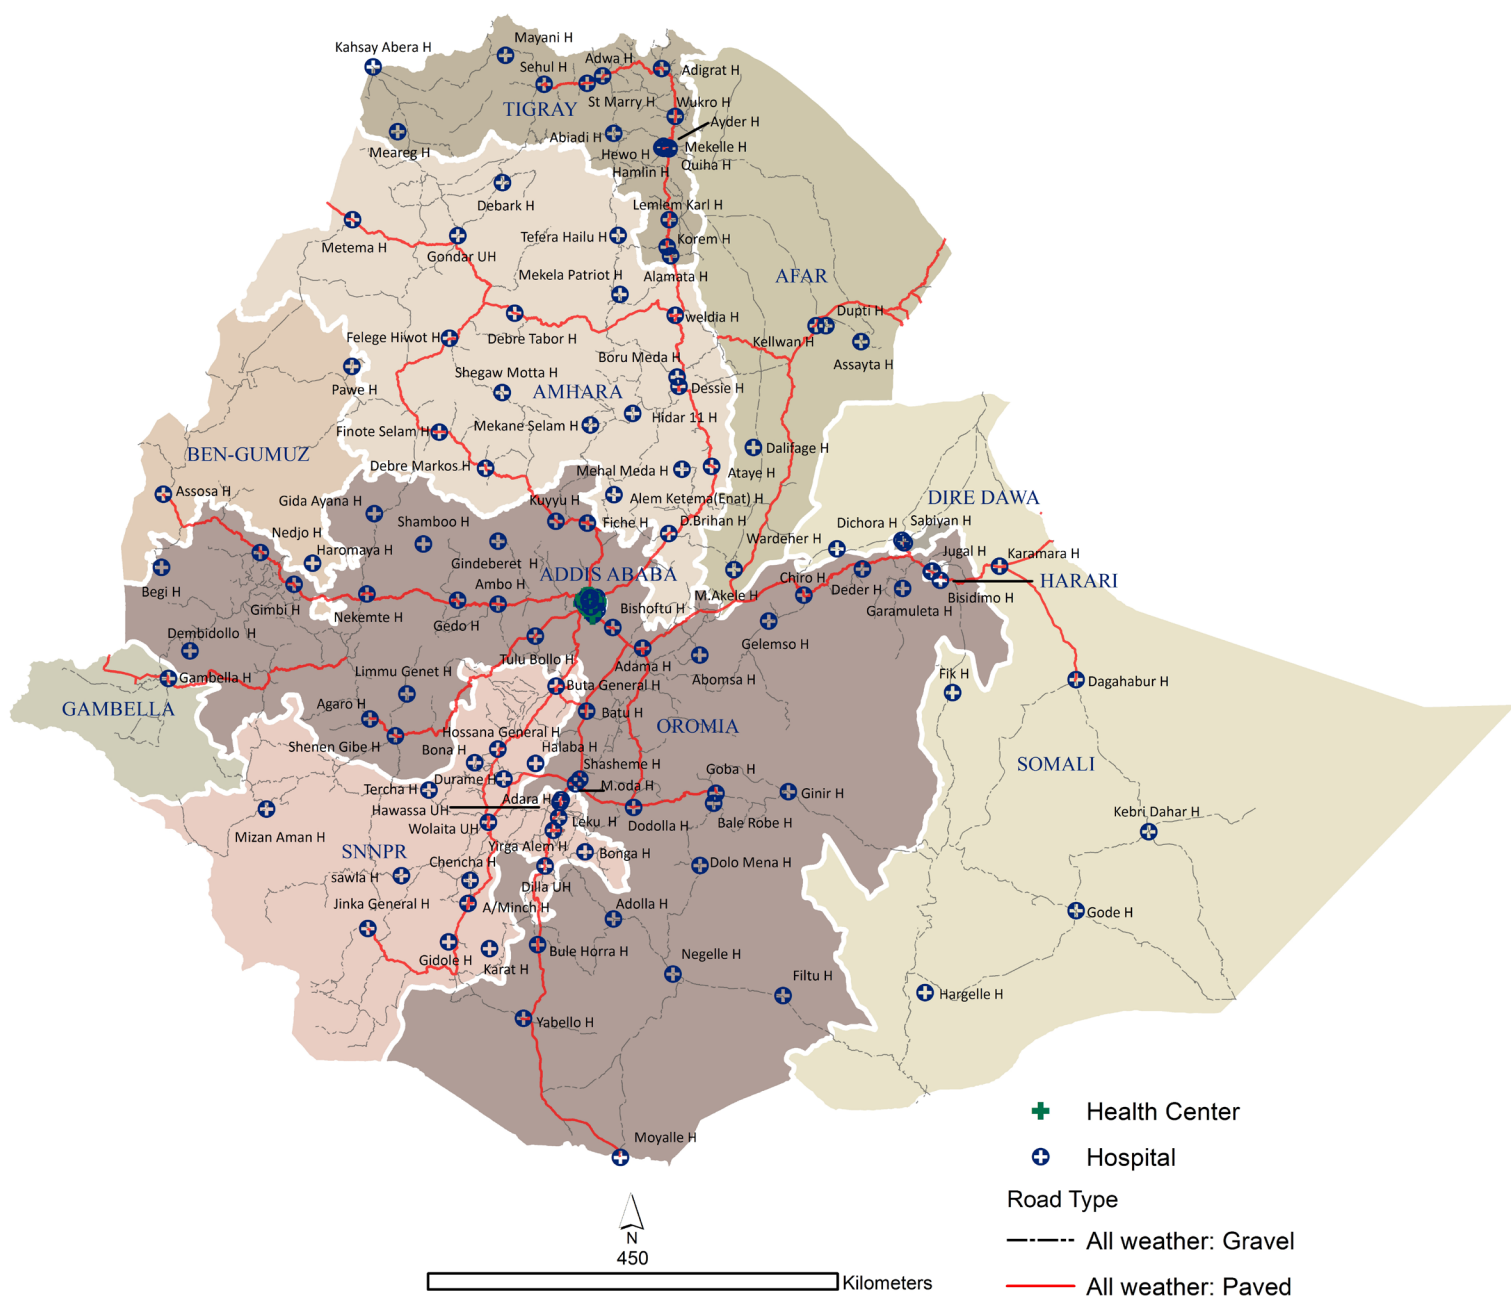

The purpose of the National Health Services Directory for Ethiopia is to enable health professionals and consumers access reliable, timely and consistent information about health services. Its development has been informed by the need to make quality information available for decision making. Regular audits and review of the information contained in the document will be made by health facilities and the national team. It is therefore hoped that updated versions will be made available regularly.

The Directory contains essential information on contact of important officials of health facilities as well as information on availability of clinical and diagnostic services. It is expected that health professionals and especially liaison officers will make use of this important document when making effective referrals. Although maximum efforts have been exerted to compile accurate and updated information, it is always advisable to communicate and verify information before making any referrals.

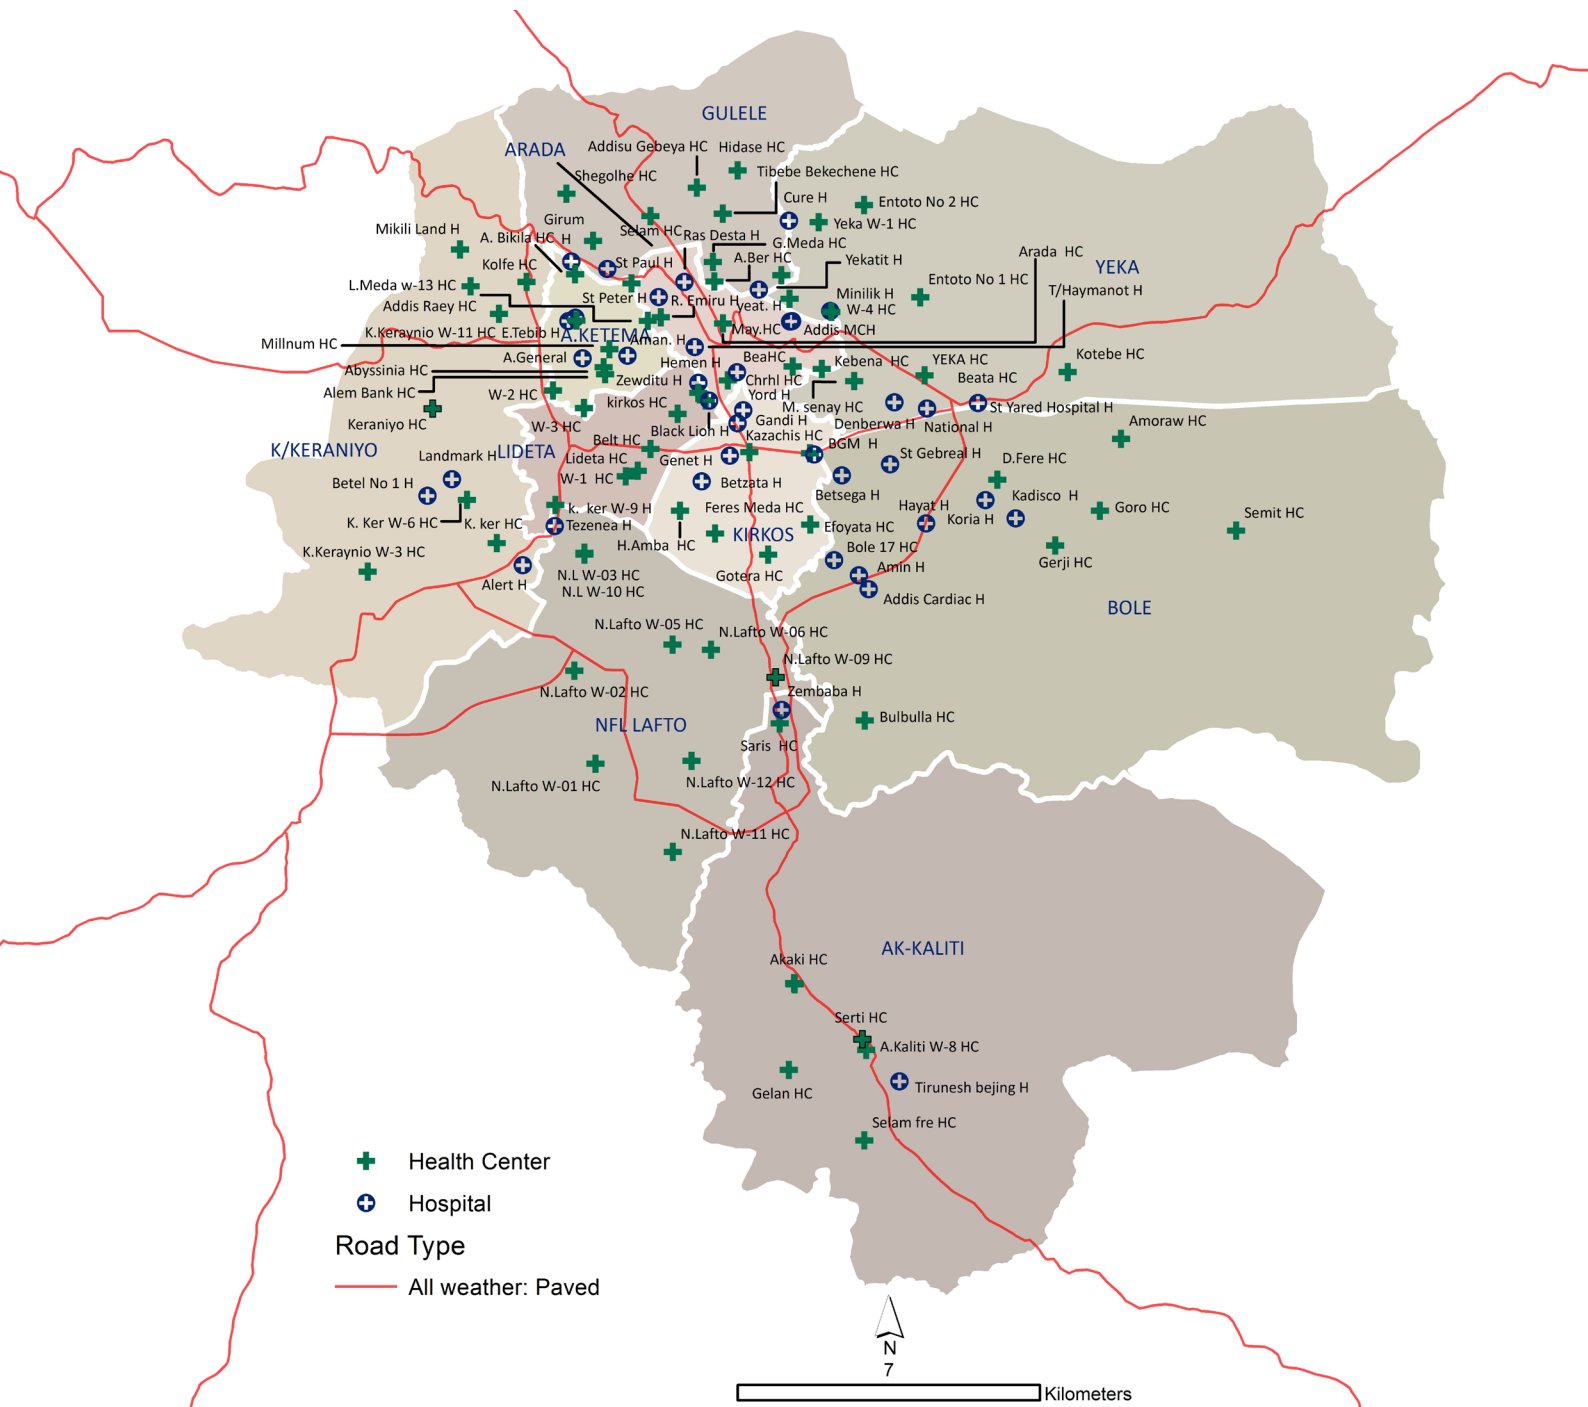

Dr. Abraham Endeshaw  
Director, Medical Services Directorate
